Documentations for software developers:

Application programming

You want to develop an application program on a host system. This means that you communicate to the device via a dual-port memory and a firmware is already loaded into the device.

Select your product:

- Loadable firmware (LFW for netX 10)
- Loadable firmware (LFW for netX 50)
- Loadable firmware (LFW for netX 51)
- Loadable firmware (LFW for netX 52)
- Loadable firmware (LFW for netX 100)
- Loadable firmware (LFW for netX 500)
- PC card CIFX
- Communication module COMX
- Exchangeable module netJACK
- netRAPID

Documentations for software developers:

Programming on netX

You want to develop a software that is executed on the netX. This means that you are using [Linkable object modules \(LOM for netX\)](#).

Development tools

Developing software executed on netX requires tools:

- [Bootwizard](#)
- [Tag List Editor](#)
